DISCLAIMER

THIS IS A SMART CONTRACT AUDIT, PAID FOR BY THE PROJECT OWNERS
I HOLD NO ASSOCIATION, AFFILIATION, OR ANY RELATION TO THE
PROJECT OR IT'S TEAM. NOTHING IN THIS REPORT IS FINANCIAL ADVICE.
PLEASE DO YOUR OWN RESEARCH.

Project Description

A more than usual optimized RFI fork, with some work left to do in that regard. No obvious malicious intents, and no true high risks. Only a blacklist, which is somewhat standard practice on the Ethereum chain.

Developer's Submitted Description

Rare and shiny NFTs, all original 151 Shibamon will be available in varying rarities. You'll be able to mint them, trade and even evolve them by combining 2 or more of the same NFT  Work and design has already started and they will play a massive part in the ecosystem Shibamon is currently building.

Project Information

Name

Shibamon

Launch Type

Fairlaunch

Telegram

<https://t.me/shibamonofficial>

Website

<https://shibamon.io/>

Taxes

5% Marketing

2% Liquidity

3% Reflection

Token Distribution

5% Dev Wallet for CEX Listing

15% Private Sale

80% Uniswap Liquidity

Launch Date

Uniswap:

November 4th, 2021, 19:00 UTC

Security Quick Report

Contract Analyzed [Solidity v. 0.8.9]

<https://etherscan.io/address/0x36b00c4c6CE3653a091c7940fC98C3acb0043871#code>

HIGH – None

Medium – 1 Risk

Low – 1 Risk

Minimal – 1 Risk

Risk assessment is color-coded for convenience.

The risks are as follows, and their respective colors:

HIGH – SEVERE risk. Could either honeypot, rug, somehow scam the user, or prevent the contract from functioning as intended.

Medium – Could allow the owner to stop trading while being able to trade himself, make the user lose money, or something similar.

Low – Risks that could allow the owner to somehow have an edge, allow users he choose to have an edge, or the ability to manipulate the contract, prices, or something similar.

Minimal - Risks that are not potentially investment-threatening, but needs be mentioned anyway. This could include poor code or poor optimization, etc.

Security and Code

Blacklist [Medium Risk]

The owner is able to blacklist any user from trading, without limits. While this is flagged as a **medium** risk, if there is trust in the developer this can be ignored.

Limitless Exclusions [Low Risk]

The owner is able to set any address to be excluded from fees, rewards, or limits at any time.

Optimization [Minimal Risk]

There are codepaths that have poor optimization in places. Constant approves for the contract aren't required, and the RFI code is not fully optimized. This is a very minimal risk as most of it is better optimized than most contracts released in recent days, but there are still improvements left to make. The burden of these lack of gas optimizations fall onto the user.

Closing Notes

The only real risk in this contract is the limitless blacklist. With trust in the team, however, this is not an issue. Please do your own research and ensure you have trust in the project and its team before investing.

Always make sure to always inspect all values and variables.

This includes, but is not limited to:

- Ownership
- Proper Ownership Renouncement (if any)
- Taxes
- Transaction/Wallet Limits
- Token Distributions
- Timelocks
- Liquidity Locks
- Any other owner-adjustable settings or variables.

Final Disclaimer

I am solely a smart contract writer/auditor. I do not promote, own, or lead projects unless specifically and explicitly stated. I am not a good trader, I know nothing of Technical Analysis, and for the most part I do not trade. Despite my best efforts, I can never guarantee full safety, though I do my best to check for and announce all risks. There are many tricks and variations that unscrupulous people can enact even with safe contracts. Please always do your research.

I am only human, and I make mistakes as well.

Nothing written in this report is financial advice. Please make sure you are interacting with the correct socials below when contacting me, to avoid scamming impersonators.
